

**Designers, Suppliers,
Installers & INNOVATORS**

Piping can be designed and run in copper, aluminum, stainless steel or black steel tube. Our work is TSSA certified.

A common master disconnect is then split into individual fused feeds to the sea can equipment including lighting drains and principal air compressor plant, boosters, etc. An ESA certificate is always included.

CSI are part of a Milton based group of engineering companies who promote sales of over \$22,000,000 and have been in the area since the 1980's. As compressed air specialists, CSI brings unique knowledge to Ontario with custom built packages and new ways for clients to save energy space and overcome their compressed air challenges.

Mobile compressed air packages allow clients to "free up" valuable production and warehouse space; control the environment the compressed air equipment operates in; ensure the quality of compressed air is maintained; make relocation of the air plant very easy and keep all compressed air equipment in one sealed and dedicated room (sea can)

Why not reaccess your air system and consider a mobile plant room as an option? Consultation is free and you can be assured you are dealing with an experienced, professional organization who specialize in this innovative solution.

PORTABLE COMPRESSOR STATION

Mobile Compressed Air Facility

**COMPRESSOR
SCIENCE INC.**
Compressed Air Innovations

Production space is valuable and expensive so why waste it or plant services. When a prefabricated plug and play compressor station provides compressed air with saved production space. No ventilation issues and the possibility of relocation whenever necessary!

Inlet air and outlet air is calculated; louvres and thermostats maintain flow and temperature with custom designed dampers.

In built lighting always ensures good visibility and the sea can be finished in gloss white to aid the lighting.

HP Boosters can also be provided for laser cutting or high pressure applications.

Designers, Suppliers, Installers & INNOVATORS

Purification to any ISO8573-1 quality can be provided with air dryers and appropriate filtration

Large access doors and 'man doors' provide ample room to allow service access for trained CSI service technicians.

Compressed air of oil lubricated or oil free design can be provided, and as Gardner Denver distributors oil lubricated, oil free and oil less scroll, rotary vane, rotary screw (single and two stage) and centrifugal technologies are available.

Condensate management will also be provided where necessary to keep the mobile compressor module in compliance with local legislation.
